IT7003 - PBL - Practical Project 2025-2026 Ready for use

Task1: IPv4 addressing and Routing.	No IPv4 design or routing selection. 0 points	IPv4 is designed based on the requirements or a suitable routing protocol is identified. with three missing req. 1 points	IPv4 is designed based on the requirements and a suitable routing protocol is identified. with two missing req. 2 points	IPv4 is designed based on the requirements with acceptable error, a suitable routing protocol is identified, and acceptable justification is provided. with one missing req. 4 points	IPv4 is fully designed based on the requirements with no error, a suitable routing protocol is identified, and comprehensive justification is provided. use a unique subnet based on private address ranges , each site will use different routing protocols (OSPF,EIGRP, RIP v2, etc.), and route redistribution 6 points
--	---	---	--	---	--

Task 2: Sites and Organizational Structure	No information given. 0 points	Different types of users are separated. with three missing req. 1 points	Different types of users are separated, optimizing the broadcast domain between switches is explained in brief. with two missing req. 4 points	Different types of users are separated, optimizing the broadcast domain between switches is explained in detail correctly without example .with one missing req. 7 points	Different types of users are separated, optimizing the broadcast domain between switches is explained in detail correctly, and an example of performance improvement is illustrated. • Implementing VLANs on switches - Assigning each department to its own VLAN - Using inter-VLAN routing using Layer 3 Switches for controlled communication - Reducing unnecessary broadcast traffic 10 points
Task 3: Security and Redundancy Measures on the LAN	No security or redundancy is explained 0 points	The design explains and justifies security or redundancy measures based on the requirements. with three missing measures per category 1 points	The security and redundancy designs are explained and justified in brief based on the requirements with one error. with two missing measures per category 2 points	The security and redundancy designs are explained and justified in brief based on the requirements. with one missing measures per category 6 points	The security and redundancy design are professionally explained and justified based on the requirements. Security Measures : Port security DHCP Snooping SSH-only management Disabled unused ports redundancy Measures : Spanning Tree Protocol (STP,MST,RPVST) Redundant links Backup switches First hop redundancy protocol 8 points
Task 4: Secure Wireless Access	No explanation 0 points	The process of implementing wireless access is explained but does not meet the requirement. with three missing 1 points	The process of implementing wireless access is explained in brief without security. with two missing 2 points	The process of implementing secure wireless access is explained in brief. with one missing 4 points	The process of implementing secure wireless access is professionally explained. WPA2/WPA3 Enterprise encryption, use Separate wireless VLANs 6 points

Task 5: Inter-Site Connectivity	No WAN explanation. 0 points	The selected WAN technology is explained in brief without proper advantages or justification. with three missing req. 1 points	The selected WAN technology is explained in brief including the advantages or justification. with two missing req 2 points	The selected WAN technology is explained in brief including the advantages and justification. with one missing Req 4 points	The selected WAN technology is explained in detail including the advantages and professional justification.All Sites will be interconnected using WAN links with reliable connectivity. Each WAN link must use a different data-link authentication protocol,Failover must be implemented using: Floating static routes 6 points
Task 6: Internet Connectivity	No NAT is designed 0 points	The NAT is designed and explained in brief based on the requirements with 3 missing Req. 1 points	The NAT is designed and explained in brief based on the requirements with two missing req. 2 points	The NAT is fully designed and explained in brief based on the requirements .with one missing Req 4 points	The NAT is fully designed and fully explained based on the requirements , • Has its own Internet edge router • Implement PAT for internal users • Each must implement Static NAT for Web Server and Email server • Ensure no NAT conflicts with inter-site routing 6 points
Task 7: Inter-Department Communication Policy	No Access List designed. 0 points	At least one of the required "Access Lists" is designed correctly and explained in brief. with four missing Req 1 points	Two of the required "Access Lists" are designed correctly and explained in brief. with three missing Req 2 points	Three of the required "Access Lists" are designed correctly and fully explained. with one missing Req 4 points	All required "Access Lists" are designed correctly and fully explained. 6 points
Task 8: IPv4 addresses Assignment	No IPv4 address assignment 0 points	At least one with site IPv4 address assignment 1 points	Two site with IPv4 address assignment 2 points	Three site with IPv4 address assignment 4 points	All site with IPv4 address assignment 6 points
Task 9: Network Optimization Implementation.	No Network Optimization is implemented. 0 points	Network Optimization is implemented in one device. 1 points	Network Optimization is partially implemented based on the requirements. 2 points	Network Optimization is implemented based on the requirements. 4 points	Network Optimization is professionally implemented in all required devices based on the requirements. 6 points

Task 10: Security and Redundancy Implementation.	No Security or Redundancy are implemented. 0 points	The Security or Redundancy are weekly implemented. 1 points	The Security and Redundancy are weekly implemented. 2 points	The Security and Redundancy are partially implemented based on the requirements. 4 points	The Security and Redundancy is fully implemented based on the requirements. 6 points
Task 11: Secure Wireless Network	No Wireless Network is configured. 0 points	A Wireless Network is implemented but does not meet the requirement. 1 points	A Wireless Network is implemented based on the requirements without security. 2 points	A Wireless Network is fully implemented based on the requirements with weak security. 4 points	A secure Wireless Network is fully implemented based on the requirements. 6 points
Task 12: WAN Technology Implementation.	No WAN is configured. 0 points	The WAN is fully implemented based on the requirements with more than two errors. 1 points	The WAN is fully implemented based on the requirements with two errors. 2 points	The WAN is fully implemented based on the requirements with one error. 4 points	The WAN is fully implemented based on the requirements. 6 points
Task 13: NAT Implementation.	No Static NAT/PAT is configured 0 points	The Static NAT/PAT is implemented based on the requirements with more than two errors. 1 points	The Static NAT/PAT is implemented based on the requirements with two errors. 2 points	The Static NAT/PAT is implemented based on the requirements with one error. 4 points	The Static NAT/PAT is fully implemented based on the requirements. 6 points
Task 14: Access List Implementation.	No is Access List implemented 0 points	One of the "Access Lists" required in Task 8 is implemented correctly. 1 points	Two of the "Access Lists" required in Task 8 are implemented correctly. 2 points	Three of the "Access Lists" required in Task 8 are implemented correctly. 4 points	All "Access Lists" required in Task 8 are implemented correctly. 6 points
Task 15: well-structured project report	all required item are missing 0 points	All required item are included , with 5 missing Req 2 points	All required item are included , with four missing Req 4 points	All required item are included , with two missing Req 8 points	The submission includes a cover page. A table of contents is provided. Tasks are clearly organized and presented. Network diagrams and configurations are included and well documented. Proper referencing and citation are applied using APA style. Appendices are included (e.g., configurations, screenshots, API usage if applicable). 10 points

Rubric options

> rt order for levels: **Ascending by number of points**

- ☒ Calculate grade having a minimum score of the minimum achievable grade for the rubric [?](#)
- ☒ Allow users to preview rubric (otherwise it will only be displayed after grading)
- ☒ Display rubric description during evaluation
- ☒ Display rubric description to those being graded
- ☒ Display points for each level during evaluation
- ☒ Display points for each level to those being graded
- ☒ Allow grader to add text remarks for each criterion
- ☒ Show remarks to those being graded
